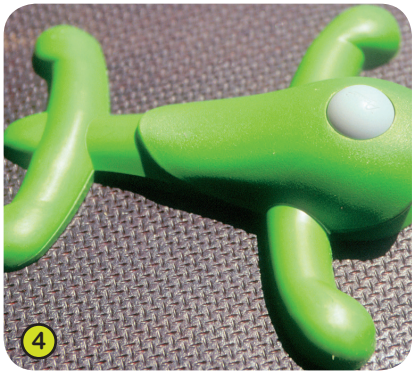
Balancing and climbing equipment
Technical specification

Basic metal

1- **The 95mm square posts** are made of lacquered galvanised steel, ensuring robustness and durability. The caps are made of injection moulded polyamide.

2- **The platforms and the climbing wall** are made from a 12.5mm thick, textured, non-slip compact material (HPL).

3- **The rope** is made of galvanised steel cable covered with polyester. **The cables** are linked together and held in place by injected polyamide spheres.

4- **The climbing holds** are made of injected polyamide to combine rigidity with sturdiness.


5- **The fixings** are made of stainless steel and protected by anti-vandalism polyamide caps.
