

# Ontwerp zelf uw eigen speeltuin

Uitknippen, plaatsen, bekijken... Uw toekomstige speeltuin in beeld brengen, was nog nooit zo eenvoudig!

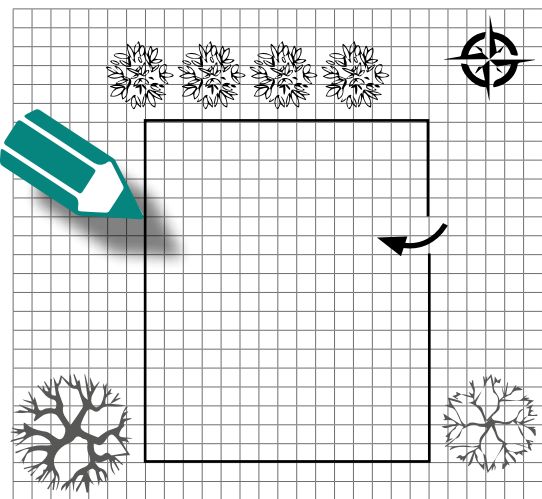

## U beschikt over:

- ➔ 2 rasterplannen (pagina's 39 en 40), met ruitjes op een schaal van 1/100.
- Een ruitje van 5 x 5 mm = een werkelijke ruimte van 50 x 50 cm
- ➔ Productminiaturen die moeten worden uitgeknipt (pagina's 41 en 43) - Schaal van 1/100.

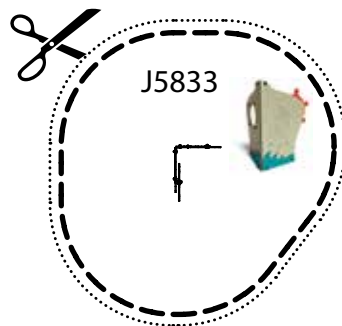

## 1 Teken met potlood het gebied dat gereserveerd is voor uw speelterrein.

Geef aan waar de toegangspunten en de vegetatie zich bevinden.  
Geef de noordelijke en zuidelijke richting aan.

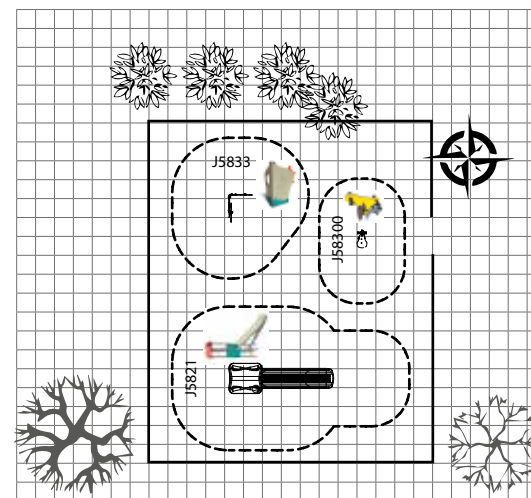

## 2 Knip de producten uit die u hebt gekozen.

Knip langs de buitenste stippellijn.  
De vetgedrukte binnenste stippellijn geeft de veiligheidszone weer (zie pagina 35).

## 3 Plaats de uitgeknipte miniaturen op het rasterplan in de gedefinieerde ruimte.

Houd rekening met de aanlegtips op pagina's 34 en 35.

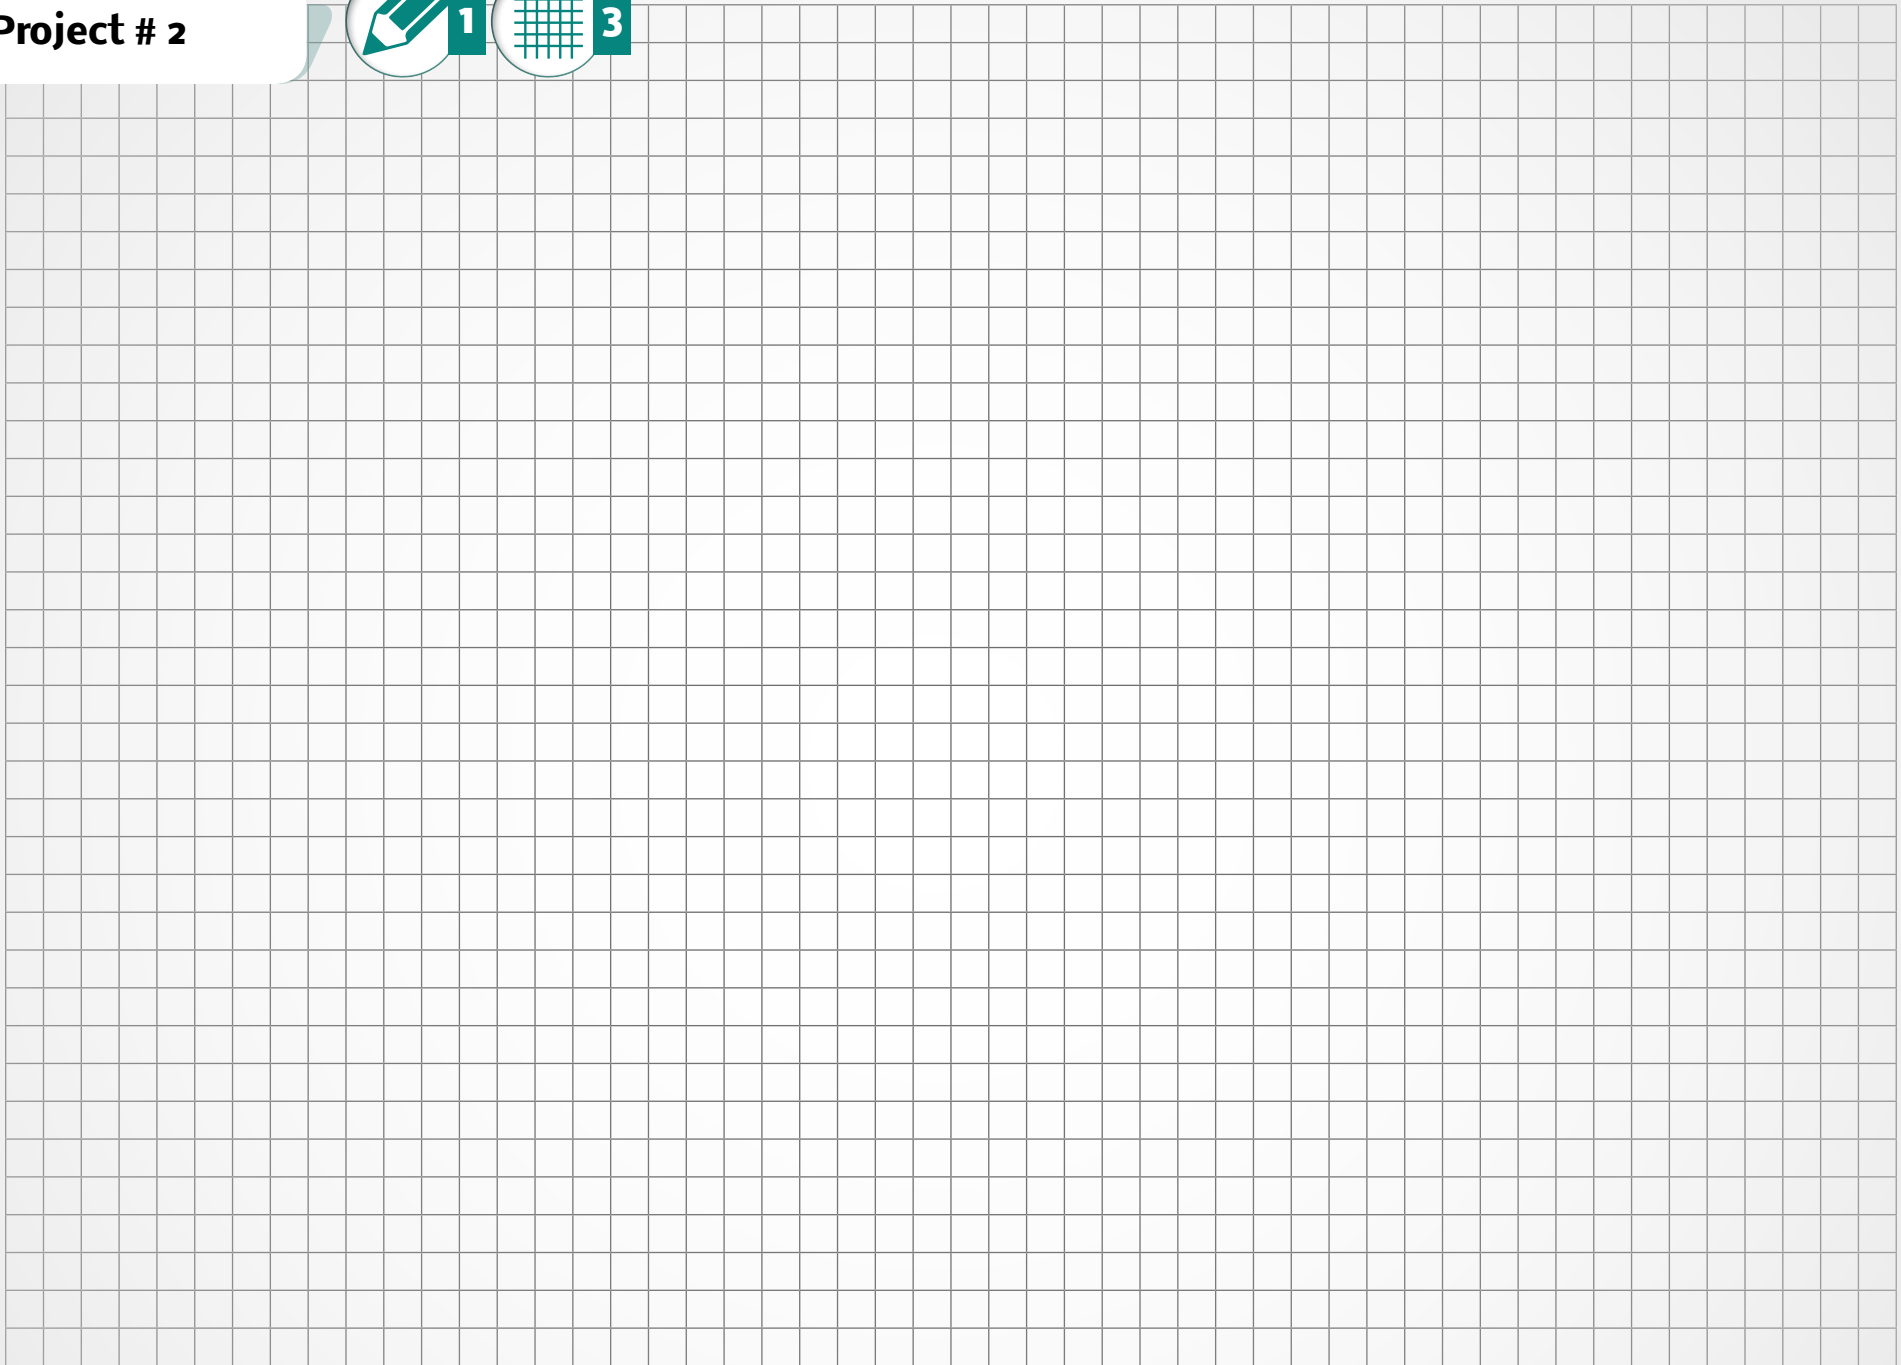

## TIP!

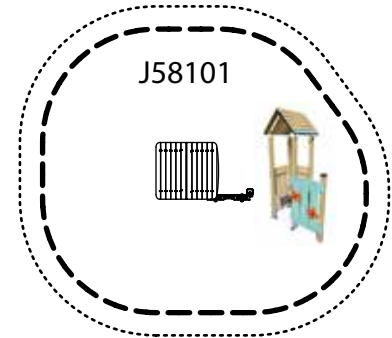

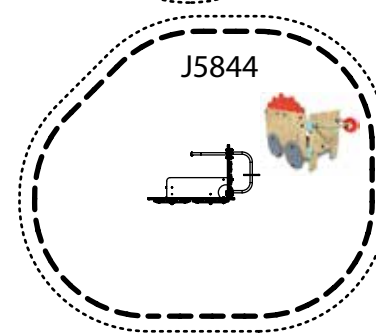

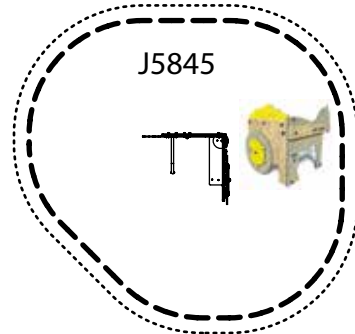

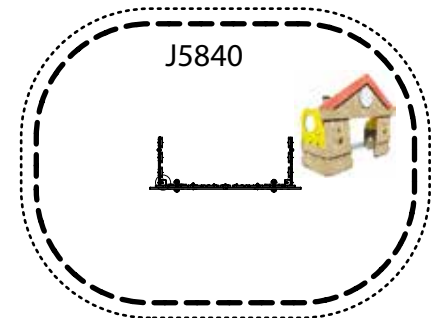

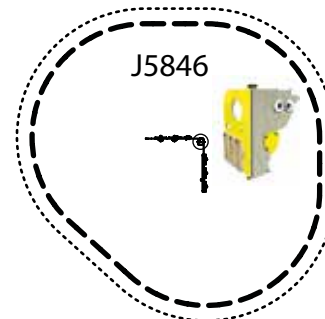

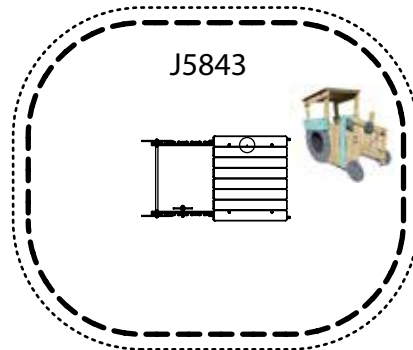

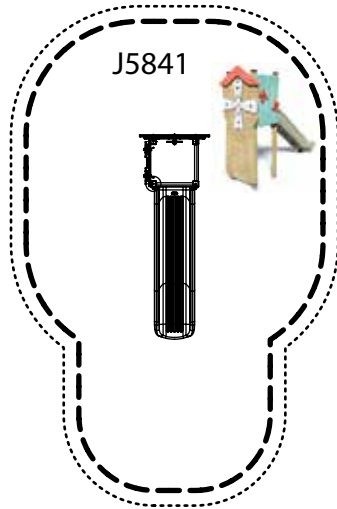

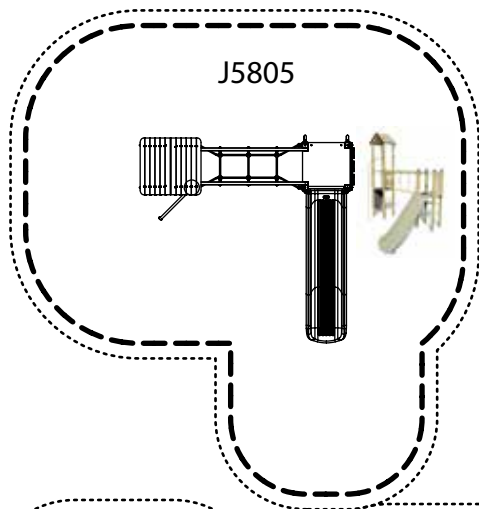

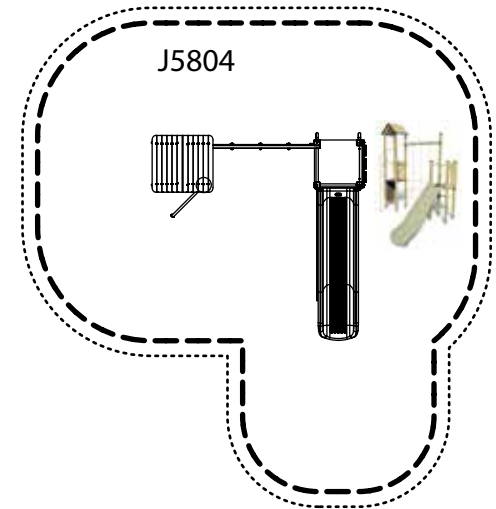

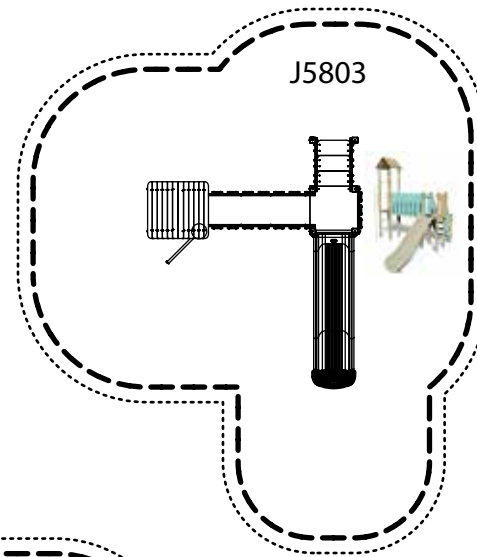

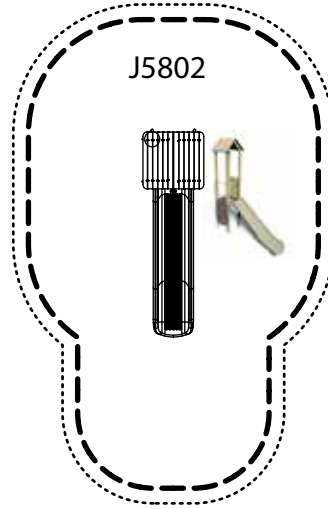

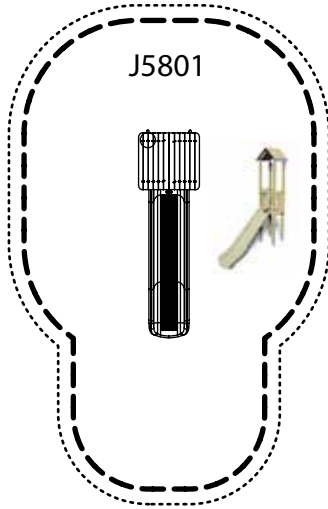

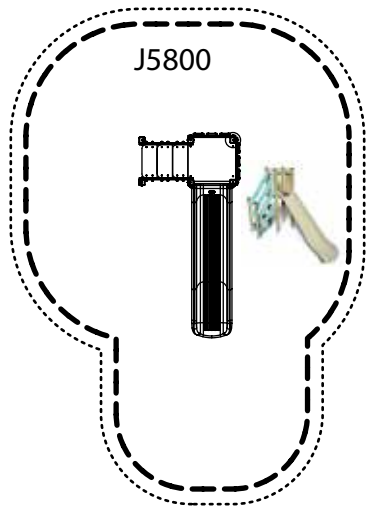

Gebruik het rasterplan om het aantal tegels te bepalen dat nodig is om uw speeltuin te installeren.  
De standaardafmeting van een valbrekende tegel is 50 x 50 cm (m.a.w. een ruitje op het rasterplan).

Tellen, optellen, vermenigvuldigen... en u krijgt de juiste speelplaats op de juiste schaal.
