PLAYING
WITH SAND

Playing with sand is one of the joys of childhood! Feeling it slip through your fingers, moving and moulding it, cooperating with new-found friends building creations with endless possibilities. Just add water and this wonderful world of sand transforms into a new dimension of play!

Whilst children are having fun playing with sand they are enjoying all kinds of developmental benefits. Sensory stimulation, evolution of fine motor skills and creativity, learning to communicate and cooperate with others, understanding cause and effect, weight and texture. Sand play develops curiosity, observation skills and concentration.

**SAND PLAY
DEVELOPS
CURIOSITY**

Sand play is supported by our creatively designed and durable play equipment. The ergonomics of the play elements have been designed for optimal use by children and allow a huge range of play and learning experiences to be undertaken.

The **Sand Factory** particularly encourages social play. The different activities are designed in a trail that allows interaction with other children. Children transport sand from one work station to another at which a new group of children are then responsible for the transformation of the sand. These different stages teach children the benefits of teamwork and help develop their organisational skills.

Contact Proludic to help you with your next playspace project!

Wonderful sensory sand play experiences within a playspace can be provided by thoughtful placement of the sand and play equipment. Accessible play elements and surfacing contribute to an inclusive play environment where all children can enjoy the fun and benefits of playing with sand.
