

# Water play equipment

## Technical specification

- 1- The lacquered panels** are 22mm thick and are made up of layers of very high quality birch. The coloured panels have been painted with three coats of lead-free polyurethane lacquer followed by an additional varnished topcoat. The edges are protected by several coats of flexible polyurethane primer.

- 2- The basins in the water equipment** are made of polyester, and fitted with a tamperproof plug providing a fast emptying system.

- 3- The vertical 95mm square posts** are made of laminated pine which has not been treated by chrome or arsenic. The laminated wood is sturdy, splinter-free and is free from shrinking or swelling. The posts are also protected from wear and tear caused by fungi, insects and termites.

- 4- The stainless steel fixings** are protected by polyamide anti-vandalism caps.
