

Water play equipment

Technical specification

J1703 / J1704 / J1705 / J1706 / J1707

1- The **lacquered panels** are made from very high quality plywood 21mm thick. Made of alternate layers of thin birch, which offers longevity and an exceptional mechanical strength. The colours are applied by electrostatic spraying of two-component polyurethane lacquer that is free of heavy metals, to ensure high levels of resistance to potentially aggressive chemicals such as anti-graffiti cleaning products.

2- The **basins in the water equipment** are made of polyester, and fitted with a tamperproof plug providing a fast emptying system.

3- The **vertical 95mm square posts** are made of laminated pine which has not been treated by chrome or arsenic. The laminated wood is sturdy, splinter-free and is free from shrinking or swelling. The posts are also protected from wear and tear caused by fungi, insects and termites.

4- The **stainless steel fixings** are protected by polyamide anti-vandalism caps.
