

Balancing and climbing equipment

Technical specification

J415

1- The climbing wall consists of coloured panels made from a compact material 13mm thick, 70% softwood fibre and 30% thermosetting resin, which stands up to weathering very well.

The coloured sides are coated with pigmented acrylic polyurethane resins; this protects them from ultraviolet radiation and damage.

2- The ropes are made of galvanised steel cable covered with polypropylene. Injection moulded polyamide connectors link the cables and keep the nets in shape.

3- The 125mm diameter posts are made of lacquered galvanised steel. The two-tone grey graining finish has a slightly undulating surface for increased scratch resistance.

4- The climbing holds are made of polyamide for its strength and rigidity.

5- The platforms are made from a 12.5mm thick, textured, non-slip compact material (HPL).

Further reinforcement is provided by lacquered galvanised steel supports, located on the underside of the platforms.

6- The tubes are made of stainless steel, diameter 40mm, guaranteeing lasting durability and reliability of the equipment.

Injection moulded polyamide fixings connect the posts to the platforms and the various play features.

7- The caps are made of rotary moulded polyethylene.

8- The stainless steel fixings are protected by polyamide anti-vandalism caps.
